More than one million people in the United States are living with, or in remission from, a form of lymphoma—the most common type of blood cancer. In fact, more than 111,000 people in the United States are diagnosed each year. With a mission to eradicate lymphoma and serve those touched by this disease, the Lymphoma Research Foundation (LRF) is a leader in funding innovative lymphoma research and providing the most up-to-date information through evidence-based patient and professional education programs.

LRF empowers patients, survivors and their loved ones to have the knowledge needed to become their own health advocate; convenes the world's leading lymphoma experts through its prestigious Scientific Advisory Board (SAB) and scientific consortia; and funds research with the greatest ability to positively impact the field and move the national research agenda forward.

LRF has a unique commitment to early career scientists to ensure the next generation of researchers are focused on improving outcomes for lymphoma patients; and is dedicated to meeting the needs of patients and caregivers through award-winning education programs.

LRF holds the Independent Charities Seal of Excellence and the Platinum Seal of Transparency by GuideStar.
